SUMMARY

A creative and technical problem solver with 3+ years of customer-facing experience in enterprise SaaS support and network triage. I troubleshoot across API, SSO, cloud, and mobile layers, explain fixes clearly to technical and non-technical users alike, and work well in remote, distributed teams. I'm drawn to support work that helps people build and grow their own communities.

EXPERIENCE

Optus | Senior Service Centre Client Specialist

Sep 2025 - Present

- Resolved 130+ enterprise mobile and network cases per month as senior escalation lead, prioritising customer issues across email, phone, and chat in a high-volume environment.
- Coordinated major incident resolution across internal teams, vendors, and Client Delivery, holding CSAT and SLA targets through clear, collaborative communication.
- Drove a queue-management project to completion across a 28-person team, introducing rotating queue ownership that cut aged cases to ~10 within a month and made SLA breaches visible as clear outliers.
- Led a cross-team initiative renewing 65+ knowledge base articles in two weeks, cutting repeat contacts and helping the team resolve faster.

RCS Australia | Senior Traffic Support, promoted from Traffic Software Support

Oct 2023 - Aug 2025

- Provided technical support for a SaaS broadcast platform, resolving API, cloud, and integration faults through root-cause analysis with development teams.
- Resolved 110+ tickets per month across the product and its infrastructure, administering Windows Server and SQL Server with proactive maintenance to prevent outages.
- Onboarded new and prospective clients onto the platform, learning the product deeply to drive adoption through presentations, demos, and documentation.
- Identified trends in recurring customer issues and surfaced them as structured feedback to product and development, directly informing roadmap decisions.

PROJECTS

SGN Flight Warehouse - Immigration Congestion Risk Prediction System

- Built a travelling decision-support tool that predicts the risk of flight delay and congestion at immigration for Vietnam's busiest airport.
- Engineered with XGBoost machine learning, Python, Azure Functions, and Azure SQL to scrape live Flightradar24 API data through unattended automation, growing ~1,500 rows daily.
- Distinguishes high-traffic arrival windows from quiet ones using 9,000+ real flight records, delivering actionable queue-time estimates through a JavaScript reporting tool.

SKILLS

Support and Ticketing: ServiceNow, Notion, Slack, Zoom, Microsoft Teams

Platform Troubleshooting: Web browsers (desktop/mobile), iOS, Android, desktop apps, branded apps, SSO/SAML, API

Cloud and Identity: Microsoft 365, Azure AD, Exchange Online, Azure SQL, Azure Functions, AWS

Networking and Security: TCP/IP, DNS, DHCP, VPN, SD-WAN, WiFi, Cisco, Palo Alto, Fortinet firewall

Data and Scripting: Python, SQL, Power BI, DAX, PowerShell, Bash, GitHub, log analysis

EDUCATION

UNSW Online | Expected Nov 2026 | Master of Analytics

Monash University | Nov 2022 | Certificate in Cybersecurity

Swinburne University | Nov 2020 | Bachelor of Business Information Systems
