SUMMARY

Data analyst and problem solver with 3+ years across SaaS support and IT operations. Builds reliable, end-to-end data pipelines (Python, SQL, Azure) and predictive models that support competitive decisions. Engineers reliability and security into every build, using AI to ship faster.

EXPERIENCE

Optus | Senior Service Centre Client Specialist

Sep 2025 - Present

- Resolved 130+ enterprise cases per month as senior escalation lead on a high-volume service desk, across email, phone, and chat in ServiceNow.
- Coordinated incident management for major faults across internal teams, vendors, and Client Delivery, holding CSAT and SLA targets.
- Drove an ITSM queue-management project across a 28-person team, cutting aged cases to ~10 within a month and making SLA breaches clear outliers.
- Led a cross-team initiative renewing 65+ knowledge base articles in two weeks, cutting repeat contacts.

RCS Australia | Senior Traffic Support, promoted from Traffic Software Support

Oct 2023 - Aug 2025

- Provided technical support for a SaaS broadcast platform, resolving API, cloud, and integration faults through root-cause analysis with development teams.
- Resolved 110+ tickets per month, administering Windows Server, SQL Server, and Active Directory with proactive maintenance.
- Acted as product SME for new and prospective clients, leading onboarding and gathering, prioritising, and translating requirements to the product owner.

PROJECTS

SGN Flight Warehouse - Immigration Congestion & Delay-Risk Prediction System

- Built and deployed a live decision-support tool for Vietnam's busiest airport, turning flight data into queue-time buffers per 30-minute window.
- Engineered an unattended Azure data pipeline into a star-schema warehouse — 15,000+ records growing ~1,500/day — with built-in monitoring that flags failures and replays missed runs automatically.
- Trained an XGBoost delay-risk classifier (ROC-AUC ≈ 0.80), validating it through backtesting against historical outcomes and correcting for bias to keep its predictions representative.
- Designed and deployed a security-hardened AI assistant (Anthropic Claude) with input validation, rate limiting, and no direct database access.

Stack: Python (pandas, XGBoost, scikit-learn), Azure Functions, Azure SQL Serverless, ETL/ELT, star-schema warehouse, REST APIs, Anthropic Claude API, JavaScript, automation

SKILLS

Support and Ticketing: ServiceNow, ITSM, ITIL, Notion, Slack, Zoom, Microsoft Teams

Platform Troubleshooting: Web browsers (desktop/mobile), iOS, Android, desktop apps, branded apps, SSO/SAML, API

Cloud and Identity: Microsoft 365, Azure AD, Active Directory, Exchange Online, Azure SQL, Azure Functions, AWS

Networking and Security: TCP/IP, DNS, DHCP, VPN, SD-WAN, WiFi, Cisco, Palo Alto, Fortinet firewall

Data and Scripting: Python, SQL, ETL, data pipelines, automation, Power BI, DAX, PowerShell, Bash, Linux, GitHub, log analysis

EDUCATION

UNSW Online | Expected Nov 2026 | Master of Analytics

Monash University | Nov 2022 | Certificate in Cybersecurity

Swinburne University | Nov 2020 | Bachelor of Business Information Systems
